

ABSTRACT OF THE DISCLOSURE

1 A metal unitary structural member for structural support. The
2 member includes a plurality of web portions extending radially from each other
3 and extending with each other in an axial direction, and a plurality of radially
4 outer portions extending in an axial direction with the web portions and between
5 the web portions in cross-section. The plurality of outer portions defines an outer
6 surface of the member. The web portions may extend from a substantially central
7 portion. The plurality of web portions may include perforations.
